

ExpenseIQ Use Case Descriptions

Register

Primary Actor: Guest

Goal: Create account

User registers with email and password. The system validates input, hashes the password, creates the account and sends a verification email.

- Validate input
- Hash password
- Create account
- Send verification email

Login

Primary Actor: Registered User

Goal: Authenticate

User enters credentials. The system validates them and issues JWT tokens on success.

- Validate credentials
- Generate JWT
- Return tokens

Add Expense

Primary Actor: User

Goal: Record expense

User manually enters an expense or scans a receipt. OCR may extract receipt data, AI categorizes the merchant and the expense is saved.

- Manual entry or OCR
- Categorize merchant
- Save expense
- Update dashboard

Edit Expense

Primary Actor: User

Goal: Modify expense

User updates an expense and the system validates and stores the changes.

- Load
- Validate
- Save

Delete Expense

Primary Actor: User

Goal: Remove expense

User confirms deletion and the expense is removed.

- Confirm

- Delete
- Refresh summaries

Search Expenses

Primary Actor: User

Goal: Find expenses

User searches or filters expenses by keyword, category or date.

- Search
- Filter
- Display

View Dashboard

Primary Actor: User

Goal: Financial overview

Displays spending summary, recent transactions and category totals.

- Summary
- Recent transactions
- Categories

View Analytics

Primary Actor: User

Goal: Insights

Displays charts and spending trends.

- Charts
- Monthly trends

Update Profile

Primary Actor: User

Goal: Manage profile

User updates profile information and uploads a picture.

- Edit profile
- Upload picture

Settings

Primary Actor: User

Goal: Preferences

User changes theme, currency and AI preferences.

- Theme
- Currency
- AI toggle

Forgot Password

Primary Actor: User

Goal: Reset password

System emails a secure password reset link.

- Verify email
- Send email
- Reset password

Logout

Primary Actor: User

Goal: End session

System invalidates the session and returns to login.

- Invalidate token
- Logout
